        EXPERIMENT
        Title
          SUB ARRAY WITH MAX SUM
          Description
            You are given a list of integers, and your task is to find the subarray with the maximum sum. Write a function or method to
            solve this problem efficiently and return the maximum sum.
            Input:
            n: the no of elements in the array
            nums (List of integers): A list of integers (1 <= len(nums) <= 10^5)
            Sample input:
            -1 2 3 10 -4 7 2 -5
            Sample output:
            20
            Explanation:
            The max subarry sum is 20. The subarray is [2,3,10,-4,7,2]
      Source Code:
 PROOF
            n=int(input())
            l=list(map(int,input().split()))
            s=1[0]
            ms=1[0]
            for i in range(1,n):
                s=max(l[i],s+l[i])
                ms=max(ms,s)
            print(ms)
        RESULT
```
